

1. Do Autism-related Rope-Worms and Morgellon-Fruiting Bodies Display the Same Biotechnological Signature?

*Harald Kautz,
CEO Aquarius Technologies,
member of timeloopsolution consortium*

Abstract

<English> Although looking different, Morgellon fruiting bodies and so called rope-worms found in the intestines of autistic children share a number of attributes. This hints to a biological and/or technological relation. The two different conditions are compared regarding their morphogenesis, genetics, their relation to intoxication, their reproductive organs and the sensation of etheric beings that patients experience, that are linking the disease to the black magic tradition. Another attribute the two conditions have in common is the obvious cognitive dissonance showed by medical and state authorities when it comes to a scientific understanding of the field of research.

<Deutsch> Trotz des unterschiedlichen Aussehens haben Morgellon-Fruchtkörper und die sogenannten „rope worms“, die in den Därmen von Autisten gefunden werden, eine Reihe von Gemeinsamkeiten. Dies deutet auf eine biologische Verwandtschaft bzw. eine gemeinsame biotechnologische Quelle hin. Beide Krankheitsbilder werden miteinander verglichen bezüglich ihrer Morphogenese, der Genetik, ihrem Bezug zu gegebener Vergiftung des Körpers, den Sporenkörpern und dem Umstand, dass es bei beiden Patientengruppen zur Wahrnehmung nicht-materieller Wesenheiten kommt, die eine Verbindung zur schwarzmagischen Tradition haben. Ein weiteres gemeinsames Merkmal ist die kognitive Dissonanz, mit der die Behörden und medizinischen Einrichtungen diesen Krankheitsbildern begegnen, wenn es darum geht zu einem wissenschaftlichen Verständnis zu gelangen.

1. Introduction

The treatment of so called rope worms found in the intestines of autistic children with MMS/CDS has been found to be the most powerful cure to bring these kids back to normal. Following the Kerri Rivera protocolⁱ by now thousand of children have partly or fully recovered. Still, the medical understanding of what these rope worms are, is not very elaborate.

Against the background of the Morgellon related research described in the article “Fiber Disease, Intestinal Pseudo-Parasites, Delusional Parasitosis & Autism – the Multiple Facets of the Morgellon Condition Explained”, a number of obvious parallels came into focus, hinting to the possibility, that the so called rope worms are actually just a different morphogenesis of Morgellon fruiting bodies, or of a species following the same biotechnological concept. Morgellons, being a transhumanistic technologyⁱⁱ, have been found to be a genetically engineered fungus with the ability to host a secondary genetic cluster, which – when growing fruiting bodies – projects the morphogenesis of a human/insect crossbreedⁱⁱⁱ. The genetics of this crossbreed are very likely delivered in separate red cells with the ability to multiply like bacteria^{iv}. Although a human/insect-crossbreed would never be able to live, the fungus multiplies these genes and grows its fruiting bodies in the projected shape of the cross-breed, mimicking both insect and vertebrate cell structures. In nature this ability of fungi to mimic extrinsic shapes is found in the family of *Beauveria brongnartii* and *Metarhizium*^v. By incorporating these genetic clusters the fungus apparently creates bioenergetic entities that have the ability to separate from the fungus tissue and continue to exist as bioenergetic parasites using the human body as an energetic host. With Morgellons, this is what seems to be responsible for the symptoms of delusional parasitosis, the feeling of invisible insects crawling under the skin. For full understanding and visual proof please read the article mentioned above.

To evaluate the hypothesis that the autism related rope worms are of Morgellon-like nature, this article will present and discuss a number of unique characteristics found in both conditions.

2. Method

Most of the research reviewed for this article was accomplished by laymen without proper medical education, lab equipment and funding. It was done by parents of autistic children, and by Morgellon sufferers who washed and documented the entities coming from their intestines. Although thousands of pictures were analyzed, there is no empiric system behind the evaluation, just a simple hermeneutic approach to bring sense into a number of fringe findings.

3. Results

The following comparison focuses on the positive correlation between Morgellons and so-called rope worms found in the intestines of autistic children.

Morgellons

1. Morphogenesis

Morgellon fruiting bodies do not grow continuously from small to big, like every other living entity does. Soya sprout size and looking mycelium interweaves into a rope like tissue that grows to full body-size, and only then the skin that covers the entity is grown and makes it look like projected by the secondary genetic cluster, showing characteristics like a head with ears, bending hips, an umbilical cord and insect eyes.

Fig 1, 2: different growth-stadiums of a Morgellon fruiting body according to visual evaluation of photographs taken by Manuela Binieck.

Autism related rope worms

1. Morphogenesis

Autism related rope worms show the same basic growth patter, only that at the beginning the mycelium is rather of a mucous-structure and transparent. Still, at the end of the growth process, if accomplished, a skin is grown that covers the entire entity. The entity when finished is of a different morphogenesis, which is snake- or worm- and not spider-like.

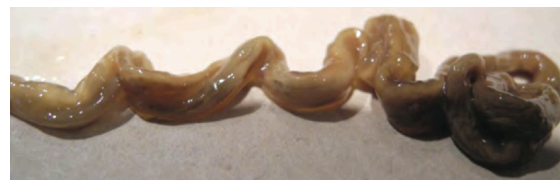

Fig 3, 4: different growth-stadiums of a rope worm fruiting body according to visual evaluation of photographs delivered by Kerri Rivera.

2. Genetics

The initial form of Morgellon mycelium is not fungal, the genome is hosted in a technologically produced microfiber, used throughout the bio-nanotechnology-world as a compound to encapsulate a viral protein envelope, which is composed of a viron (1/150th times smaller than a virus) with DNA, RNA, RNAi (mutated RNA) or RNAsi linear or ring plasmids for specific functions^{vi}. This is exactly the setup needed to combine multiple, normally incompatible genetics via T-junctions^{vii}.

In single cases, inside of the lesions of Morgellon victims insect looking entities were found, that could be identified as looking like *Cymoninus notabilis*, the same seed bug that is part of the rope worm genetics^{viii}.

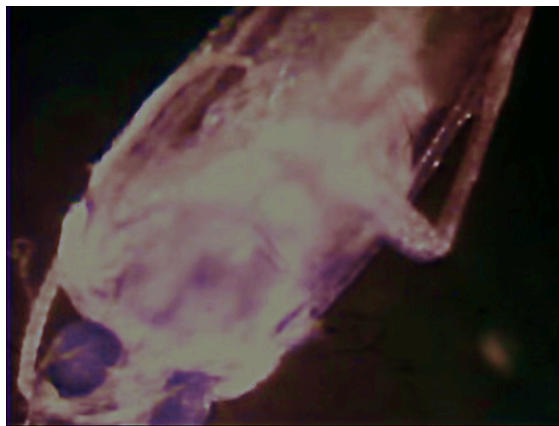

Fig. 5: Pseudo-insect found in a lesion of a Morgellon victim.

2. Genetics

DNA sequencing of rope worms showed^{ix}: 99% Human pseudogene, chromosomes 8, 17, 98% *Cymoninus notabilis* (seedbug), 99% Human mtDNA, *Rhysotritia duplicatica*, a mite or *Branchiobdella balcanica*, a worm, S-3+18S-DR 99% Human 18S rRNA 99%, uncultured Fungus or uncultured Eukaryote Clone. These findings 100% fit into the concept of crossbreeding different species that are normally incompatible and then having them grown as a secondary genetic cluster as a fungal fruiting body, just like it was visually predicted from the analysis of Morgellon related phenomena.

One of the genes identified was from *Cymoninus notabilis*. The same entity has been found as a pseudo-morphogenesis in a skin lesion of a Morgellon victim. The pseudo insect on the Morgellon-side hints to the possibility that a part of the complex genome broke away and made the fungus display only one of the aspects of the crossbreed.

Fig. 6: *Cymoninus notabilis*, the seed bug who's genetics were found in autism related rope worms.

3. Relation to intoxication

Morgellons collect toxins and store them in the fruiting-bodies. This actually is the biological function of the original fungus, the reason why the immune system lets the fungus prosper as part of the symbiotic environment.^x

4. Spore generation

Morgellons reproduce by spore-containing hexagonal particles that are positioned on the single insect eye on the forehead of the fruiting body.

5. Sensation of etheric beings

Some clairvoyant patients have the ability to see the bioenergetics entities. Other patients only feel crawling under the skin. The pictures delivered as artwork describing what they see especially focus on the human compound of the crossed genetics^{xi}.

Fig. 7: Morgellon related demon according to the vision of a clairvoyant patient.

3. Relation to intoxication

The removal of the rope worms leads to a reduction of the symptoms of neuro-degeneration caused by various toxins.

4. Spore generation

Rope worms create fecal stones with white dots inside that possibly are the spores of the fungus. This would need to be verified.

5. Sensation of etheric beings

Autistic children seem to be fascinated by snakes. A couple of companies even specialized on half-mechanic snake-toys especially produced for autistic children. Artwork of clairvoyant patients shows what sensations exactly inspire autistic children to be fascinated by snakes^{xii}. The most thrilling detail is that both spiders and snakes display the third eye in the middle of the forehead.

^{xii} <http://community.fireflyfriends.com/blog/article/reptiles-and-minecraft-the-things-autism-parents-learn-to-love>

6. Connection to mythologies of the black magic tradition

There is a high resemblance of Morgellon related visions to Jahbulon, the god of freemasonry^{xiii}. This hints to a direct link of the disease to black magic cults. Also, the human/spider crossbreed is linked to the archons known since the time of the gnostic tradition, to the entities described in the Necronomicon and from there to the modern interpretations of the mythology, the demonic entities described by Lovecraft, that as a popular theme are the bases of the Chtulhu mythology, that also lead to the modern interpretations of the Necronomicon. The main connecting element in all traditions/visions is the third eye in the middle of the forehead.

7. Obvious cognitive dissonance showed by medical and state authorities when it comes to scientific understanding of the condition

The existence of Morgellons is denied by state authorities, entries of scientific papers are rejected. The condition is claimed to be delusional by most doctors; patients are treated with psycho-pharmaceuticals. Many labs do not except requests for biochemical and genetic analysis, even when offered regular payment.

6. Connection to mythologies of the black magic tradition

The human/snake-crossbreed very much reminds of the story about the deterioration from paradise, the initial event that according to biblical stories brought humanity under the influence of evil. It might or might not be a coincidence that the same medical tradition, that causes much of the havoc with the application of vaccines and antibiotics, carries the snake wired around the healers stick as their central symbol. Other associations are given to the Kundalini and Tummo snakes as bioenergetics entities addressed in Kundalini Yoga as well as to the snakes of the Chinese tradition, which are mistaken as dragons.

7. Obvious cognitive dissonance showed by medical and state authorities when it comes to scientific understanding of the condition

The existence of the so called rope worms is not recognized by main stream medicine as being part of the autism spectrum. CDS treatments that actually helped thousands of patients to recover are criminalized in public. Despite thousands of recoveries state authorities insist on the belief that autism is not curable.

4. Discussion

As to the comparison between Morgellons and rope-worms a similarity between the biological/biotechnological concept can be regarded as given. The main differences between the two conditions are the type of the initial fungus – Morgellons form mycelium, rope-worms grow out of some kind of myxomycete (slime-mold). And of course the genetics of the secondary cluster partly differ.

What has been found to be a bio-energetic entity produced by pseudomorphous fruiting-bodies of these two fungi with a secondary genetic clusters, seems to be the entities that have been regarded in mythologies as demons. The fear to be labeled “irrational”, when outing yourself to be someone who believes in demons, might be strong. Once “demons” can be identified as biotechnologically generated “software” designed to interfere with the human spirit, the “fringe” or “mythological” element of

^{xiii} <https://en.wikipedia.org/wiki/Jahbulon>

these findings becomes a technological element, and what we face, simply is biotechnology utilized by transhumanism. The degree of the transhumanistic attack on humanity can be understood when we realize that the overall agenda develops into an direction, that is so severe that some authors claim that statistics prove that by the year 2032 100% of the newborn boys will be fully autistic, and 2042 100% of the newborn girls will be as well^{xiv}. If you want to find out how accurate these predictions might be, you can follow the link and join the discussion.

There is a second element that might cause cognitive dissonance: the idea that artificial intelligence and transhumanism are old concepts that existed long before humanity developed into a technological direction. Some people already came to an understanding that most of the technological progress we face today comes from either psychic insights to alien civilizations or from back-engineered alien technologies, recovered from crashed UFOs. Other people live with belief systems that reduce the world to a 3D realm experiencing a linear development. Despite of tons of evidence they are neglecting the existence of alien presence and of prehistoric technologically evolved civilizations, just because the mainstream media and school education pushes them into this direction. The discovery of traditional demons appearing in the context of transhumansitic technologies is another irrefutable evidence of this kind.

What we need to understand is that obviously part of humanity might be knowingly or not knowingly might be selling their fellow beings off to an alien intelligence that plans a "borg" like^{xv} assimilation of humanity with transhumanistic technologies. If this sounds to weird to be true, listen to Ray Kurzweil, the godfather of transhumanism, today responsible for technological development at google.

Nanobots will infuse all the matter around us with information. Rocks, Trees, everything will become one with these intelligent computers. From that point, we are going to expand out to the rest of the universe. We will be sending nano-technology fused with artificial intelligence, swarms of those will go out to the universe and basically will find other matter and energy that we then can harvest to expand the overall intelligence of our human machine civilization. The universe will wake up, it will become intelligent, and that will multiply our intelligence trillion of trillion fold, and we can't really fully contemplate, well this is really the main reason, why this is called a singularity. But no matter what you call it, it will be the universe waking up. So, "does God exist", I would say "not yet"^{xvi}.

Ray Kurzweil in his phantasy is already projecting the takeover of other planets with the type of machine/bioform-fusion as described above into deep space. The problem with Ray Kurzweils vision is that it eventually might lead to the total destruction of our recent biosphere. The machine/bioform-fusion is based on energetic vampirism. Energetic vampirism of this quality is what has been defined as demonic and evil eons ago. We need to understand that this force commonly addressed as Satanism is present today, and that it drives an agenda that obviously controls politics, agriculture, medicine, the military domain as well as the intelligence communities – all of them adding compounds to the overall concept that leads to a biochemical degeneration of humanity, opening the biology to transhumanistic technologies. With Morgellons being the traceable security signature in the new 20-dollar

^{xiv} <http://scienceblogs.com/insolence/2012/07/19/battling-antivaccinationists-at-freedomfest-part-2-dr-whitaker-responds/>

^{xv} Species from the star trek series assimilating other species turning them into half bio-forms, half machines, interconnected with a biotechnological hive-consciousness.

^{xvi} Ray Kurzweil: The Singularity is near. Documentary. Available at: <http://www.singularity.com/themovie/#.VGZe4aVUPwI>

note we might add the private banking system to the list of institutions, which should be brought back into democratic control if we as a biological species intend to survive.
